

GLA1 JS Programming basics

DO NOT EDIT HTML FILE. ONLY ADD JS CODE TO FINISH.

1. Create a folder named GLA1, add a html file and add JS file as follow. There is only basic structure in html. There should be no element in body tag. (5 points)

2. Add JS code to display your full name inside h1 element and add the following style (align center and color gray or #A9A9A9) (20 points)

3. Add JS code to append two input elements and one button, when click the button, the sum of these two numbers will show on the page. (30 points)

4. Add JS code to create an arrow function to validate the value of two input boxes (use try catch). Only the number is validated. If input is not number, show the error message on the page (DO NOT USE ALERT) and set the input box with red border. (30 points)

5. Add JS code to style your page. (5 points)

How to submit it: (10 points)

After you are done, push your code to your GitHub and deploy your page to GitHub page. Create an empty word document and paste your GitHub repository link and your Github page link into your document (There should be 2 links in your document). Submit this document in D2L.
